

Drawing 3D Solid Objects in MS Word

Volume of a Cylinder

$$V = \pi r^2 h$$

To draw the cylinder you need

- a rectangle for the middle
- a squashed circle for the top
- an identical squashed circle for the bottom
- the top circle is in front of the rectangle
- the bottom circle is behind the rectangle
- you must remove the bottom edge (border) of the rectangle
- the rectangle and bottom circle need the SAME SOLID color
- make the top circle a lighter color than the others
- GROUP all 3 pieces so you can move the cylinder or copy it
- put arrow-heads on the arrows

Volume of a Cone

$$V = \frac{1}{3} \pi r^2 h$$

To draw the cone you need

- a triangle for the upper part
- an ellipse (squashed circle) for the bottom
- arrange the bottom ellipse behind the triangle
- remove the border lines from the triangle
- the triangle and the bottom need the SAME SOLID color
- GROUP both pieces so you can move the cone or copy it

Volume of a Sphere

$$V = \frac{4}{3} \pi r^3$$

The sphere consists of

- a normal circle
- an ellipse (squashed circle)
- the border line of the ellipse is a slightly different color

Volume of a Pyramid

$$V = \frac{1}{3} \text{base} \times \text{height}$$

The pyramid consists of

- two triangles
 - one dotted line, using a lighter color
- You need to figure out how to make these sensibly

Now figure out how to draw a 3D house - with a sloping roof.
